SKILLS

Tools and Technology: PostgreSQL, Visual Studio Code, Git, GitHub, AWS, Supabase, Docker, Google Cloud, MS Azure, N8N
Programming languages: JavaScript, Python, TypeScript, HTML, CSS, Java, C++
Frameworks/Architecture: React, Node.js, Next.js, Tailwind CSS

EDUCATION

University of Texas at Tyler – *B.S. in Computer Science, with Honors (4.0 GPA)* | May 2025

WORK EXPERIENCE

Candidate Experience – *Web Developer Part Time* | Nov. 2025 – Current

- Developed scalable web applications with **React**, **Next.js**, and **TypeScript**, improving performance and ensuring type safety.
- Leveraged **Supabase** for backend services, handling database operations and user authentication, which streamlines data management.
- Designed automated workflows and integrated third-party services using **N8N**, reducing manual processing time for internal tasks.
- Collaborated in an Agile team using **Jira** for task tracking and **Git/GitHub** for version control, enabling faster delivery of features.
- Created the blog page to improve SEO and update users on the latest news in the job market.

SalesMind AI – *AI Engineer Internship* | Oct. 2025 – Dec. 2025

- Engineered core AI logic for a marketing automation platform using **BullMQ** for high-volume message queuing, which enabled the system to process thousands of messages per minute and reduced latency in lead scoring.
- Deployed automated multi-channel workflows (email, phone, DM, LinkedIn) to streamline lead discovery and engagement for sales teams.
- Architected a full-stack application using **Next.js** and **Node.js/Express** for a responsive lead management experience.
- Implemented **Docker** containerization to streamline development and production deployment cycles.
- Enhanced the AI lead-discovery engine by designing data ingestion and ranking systems to prioritize companies based on user criteria.

Amptier – *Software Engineer Internship* | June 2025 – Dec. 2025

- Optimized **Emergency Management System (EMS)** front-end with HTML, JavaScript, and Tailwind CSS, reducing map UI latency by 70%.
- Collaborated with a **Flask API** team to architect REST endpoints and JSON validation, cutting integration defects by 50%.
- Led iterative UX sprints and testing to reduce system errors by 40% and ensure stability under peak loads.
- Built **Sun Bucks**, a case-management platform automating eligibility and bulk application processing for California school districts.
- Engineered a **React Native** app for the Williamsburg African American Trail featuring offline caching and guided audio tours.
- Deployed applications on **AWS** using **EC2**, **S3**, and **IAM** to ensure scalable and secure cloud environments.

University of Texas at Tyler (UT Tyler) – *Software Engineer Internship* | Jan. 2025 – May 2025

- Worked 10 hours per week during the spring semester as an undergraduate research assistant on the Virtual Teaching Assistant (VTA) project, using Visual Studio Code and Azure to build components that enabled the pilot rollout of the VTA in two university courses.
- Developed an **AI chatbot** leveraging a **RAG (Retrieval-Augmented Generation) model** and **vector databases** to provide accurate answers to student queries based on class-specific resources.
- Designed a **FastAPI** server architecture, improving API response time by 40%.
- Created and managed **PostgreSQL** vector databases populated with documents uploaded by professors to enhance the RAG model's accuracy and output.
- Deployed system on university's private cloud infrastructure, using **Docker**, for real-time support.
- Completed the VTA for a test pilot, which is planned to launch across UT Tyler during the Fall 2025 semester, enhancing the university's technological capabilities.

COMPUTER SCIENCE PROJECTS

Sprout | Jan 2025 – Apr 2025

- Collaborated with a team of 6 developers to create **Sprout**, an interactive web platform powered by **React**, **Node.js**, and **Next.js**, designed to educate users about gardening and assist in planning personalized gardens.
- Incorporated **UI/UX design principles** to ensure an intuitive and engaging user experience, including seamless drag-and-drop functionality for garden layout customization.
- Engineered advanced algorithms to detect **plant-spacing conflicts** and **incompatible plants**, promoting optimal garden health and organization.
- Successfully delivered this project as my capstone, and won first runner up at the capstone fair, highlighting teamwork, a user-focused approach, and a high demand for a gardening planner website.

Caption Snap | Sep 2023 – Dec 2023

- Developed and launched an **image captioning app** on Google Play as part of my senior honors project.
- Built and integrated **Machine Learning/AI models** using TensorFlow to recognize and generate captions for images.
- Utilized **Google Cloud** to store the model and enable real-time functionality for captioning scenes captured by users.
- Designed the **frontend** with **Flutter** and implemented the **backend** using **Python**, ensuring seamless performance across all devices.

Software Methodologies Research Paper | *Sep 2023 – Dec 2023*

- Wrote a research paper about the effectiveness of major **software development methodologies**.
- Methodologies discussed include **XP programming, DevOps, Kanban, Rapid Application Development, Joint Application Development, V-model**, and **AI integration** in software engineering.
- Graded each methodology based on how much they save time, money, and affect the software's quality.
- Concluded that **DevOps** is the best methodology overall because it ensures the developers and operators work together, which saves time with feedback and increases the quality of the software.

Trip Sharing Database | *Jan 2024 – May 2024*

- Collaborated with a team of six members to design a database for a trip-sharing website.
- Contributed to the creation of an **Entity-Relationship (ER) model** and performed **normalization** to optimize database structure.
- Acquired proficiency in **MySQL** for coding and managing the database effectively.

Craig.com Search Engine | *Jan 2024 – May 2024*

- Developed a small-scale search engine that compares how a user's query matches certain research papers.
- Learned and used information retrieval techniques such as tokenization, tolerance retrieval, and ranking.
- Coded in **C++** and **Python**.

HONORS/AWARDS

- **Summa Cum Laude** | *May 2023 & May 2025*: Awarded for graduating with a 4.0 GPA at Tyler Junior College and the University of Texas at Tyler.
- **Outstanding Computer Science Student at UT Tyler** | *April 2025*: Recipient of the Outstanding Computer Science Student Award 2025, recognizing my exceptional academic performance, contributions to UT Tyler's Virtual AI Teaching Assistant, and leadership in the field.

CERTIFICATIONS

- **IBM Artificial Intelligence Fundamentals**: Completed a certification course that teaches AI, Machine Learning, and Computer Vision.
- **IBM Cyber Security Fundamentals**: Completed a certification course that teaches Cyber Attacks, Encryption, and Ethical Hacking.
